Although for many people the topic of forensic science is far from what they would like to read about, I find it fascinating. This book is put together so expertly that it will be appealing to many. Forensic Science: in Pursuit of Justice focuses mainly on the ways science has become vital in solving many crimes. Fingerprinting, DNA testing, the insects found at different times on human remains that help to determine time of death – it all fascinates me and this book does not disappoint in going into detail. The author has added side bars of information, for example, one that informs the reader that the same forensic techniques used to investigate crimes against people can be applied to investigate crimes against wildlife. Here are the chapters: DNA Fingerprinting Bodies of Evidence Chemical Clues Firearms Analysis Written in Blood No More Mistaken Identity Never Without a Trace From Page to Screen The Future of Forensics Timeline Essential Facts Glossary Additional Resources Source Notes Index About the Author The author delves into the history of forensic science and describes its use in actual events,

including previously unsolved crimes, missing persons cases, toxicology information, the CSI (Crime Scene Investigation) aspect, and so much more. The photography throughout this book is bold and effective, adding superb descriptive detail. Lindsey Carmichael's writing is easy to understand as she lays out a very complex subject in an organized, accurate way that is totally absorbing. Forensic Science: in Pursuit of Justice could be the book that inspires a young person's interest in this vital field. There is so much amazing information contained in this book, from the earliest days of recorded methods to present digital forensics. The timeline included at the back of the book starts with 44 BCE when the first recorded autopsy was performed on murder victim Julius Caesar! For readers of any age Forensic Science: in Pursuit of Justice will definitely answer questions regarding criminal investigation.
