Good notebook, very helpful for chemistry AP study!

I was asked to review this book by a friend of the author. I am not affiliated with the author or publisher in any manner. I teach all levels of chemistry at the high school level, including AP Chemistry. Overall, I really like what this book has to offer in terms of price, size, and contents. It is clear the author is fully apprised of the changes to the AP test as evidenced by the omission of discussions of Lewis acids, the Nernst equation, etc. I found the questions (both MC and FRQ format) to be of comparable difficulty and style to those found on the actual AP exam. I particularly liked the section on Laboratory Review--it briefly yet clearly summarizes with simple graphics the tools and techniques that are the basis of laboratory-based questions. The content area is organized by 6 Big Ideas as set forth by the College Board in the new AP Chemistry curriculum. I admit this took a little getting used when skimming the book for discussions of a particular content area (such as Lewis structures) that would generally garner its own chapter in an AP textbook or in most of other review books that are on the market. In this regard, I felt the book would have been greatly aided by an index to complement the subject list found in the table of contents. For this reason I give the book four stars out of five. I would definitely recommend this book to my students as a supplementary study aid as they pursue their AP Chemistry studies during the year in preparation for the AP Exam in May.

I tutor high school chemistry students and I have purchased several of the AP test guides to help prepare my clients for the exam. This most recent version from Cliffs Notes is by far the best of them all. The author did a splendid job explaining each of the subjects covered in the test. She has a very effective way of introducing and developing the concepts. I highly recommend this book, both

for students studying for the AP exam and for teachers and/or private tutors who are assisting students with their studies. I also tutor AP physics, but I have not yet purchased the Cliffs Notes prep guide for that subject. Hopefully that book is as well done as this one!

I scored a 4 on the AP test and I owe it to this book. I probably would've scored a 2 without it. I never would've been prepared for the test without this guide's help. THANK YOU CLIFFS NOTES!!!

I have historically used AP guides to assist in high school chemistry tutoring. This new guide is, by far, the best I've used. Highly recommended.

This book is updated with all the content needed for the new edition of the exam. The practice questions are alright, and the content explanations are very easy to follow. All the info on the test was covered in this book and did not go into too much depth. Having scored a 5 on the exam, I recommend this book for the class and preparing for the exam.

This new book follows the "Big Ideas" concept of the new AP Chemistry curriculum. I almost got the 2009 AP Chemistry Cliffs because it was cheaper, but realized the curriculum and exam had changed!

This book was incredibly helpful and insightful. I highly recommend!
