I have no doubts that, for many years to come, this wonderful book will serve as one of the very best places for people to start to make a difference. --Jonathan Furner, Department of Information Studies, UCLA --This text refers to an alternate Paperback edition.

David Bawden is Professor of Information Science at City University London, editor of Journal of Documentation, a council member of Aslib, and has published extensively in information

science. Lyn Robinson is Program Director for Library and Information Science at City University London, and a well-known writer and presenter in the subject. She is also the author of *Understanding Healthcare Information*.

This book is an excellent introduction to Information Science. I used it in a course for my Master's in Intelligence Studies as an introduction to data management and information science but I know our school also used this book for the Library Science Master's program. I'm sure it's well suited for either. Very well-written and easy to comprehend.

Information science is a multidisciplinary field that is still emerging, trying to find itself. As a result, its foundational literature has previously been spread all over the place. Now we have a pretty nice textbook that brings it all together, giving newcomers to the field a really nice overview of the present state of the field, including areas where research and discussion are most sorely needed. This is one I'll be keeping and referring to time and again.

Needed this book for the following class: IS 510: THE INFORMATION ENVIRONMENT, The School of Information Sciences at The University of Tennessee. It's a decent book. General library and information science knowledge.

Very easy to read for a textbook. My professor is jumping through this book thematically instead of chapter by chapter.

Fast delivery and great textbook.

Lovely book.
