Logic: The Essentials

Synopsis

LOGIC: THE ESSENTIALS concentrates on the fundaments of introductory logic. Practical in orientation and content, Essentials is loaded with class-tested, proven practice exercises. This new text is based on the classic and bestselling textbook, A Concise Introduction to Logic, and nearly all of the exercises in the correlative chapters, so central to the effectiveness of that text, have been retained to ensure more than enough practice for students to master the central concepts. The book focuses largely on deductive logic, but it contains sufficient treatment of induction to provide a solid footing for informal fallacies. The result is a contemporary approach--more focused, more practical, less theoretical--built on a tradition of precise, elegant, and clear presentation of the subject matter of logic, both formal and informal.

Customer Reviews

"[The new Hurley text would work] better than my current text, and past texts as well....We need a text that is short, simple, organized, direct, coverable in 14 weeks \tilde{A} ¢ \hat{a} ¬ \hat{A} |; gives the students something they can use and apply to increase their intellect, critical thinking and argument evaluation skills, AND is as cheap as possible (while still maintaining aesthetic appeal [good paper, charts, appendix, etc.])."

Patrick Hurley was born in Spokane, Washington in 1942. He received his bachelor's degree in mathematics (with a second major in philosophy and a physics minor) from Gonzaga University in 1964 and his Ph.D. in philosophy of science with an emphasis in history of philosophy from Saint

Louis University in 1973. In 1972, he began teaching at the University of San Diego, where his courses included logic, philosophy of science, metaphysics, process philosophy, and legal ethics. In 1987, he received his J.D. from the University of San Diego, and he is currently a member of the California Bar Association. He retired from teaching in 2008, but continues his research and writing, including work on A Concise Introduction to Logic. His interests include music, art, opera, environmental issues, fishing, and skiing. He is married to Dr. Linda Peterson, who retired from teaching philosophy at the University of San Diego in 2015.

good for classes

good

Still on chapter 1 but so far going well - easy to understand explanations. Two complaints: first, on page 30, a hypothetical school shooting is used to introduce the section on inductive and deductive arguments - I find this to be in extremely poor taste. Second, the homework assignments (which are lengthy to begin with) are set up in such a way that a great deal of writing/typing is required to complete them. It's taking me more time to type than it is to solve the problem. It would be nice if the e-book came with a code so I could download the homework pages as PDFs and then mark on the pages instead of having to type everything in.
