Certification Review For Nurse Anesthesia (Anesthesia/Pain Medicine)

Synopsis

Complete review for the nurse anesthesia certification exam written by experienced nurse anesthesia educators. More than 800 questions and answers provide the practice you need to excel on the National Certification Examination. This one-of-a-kind review is specifically written to provide student nurse anesthetists with the practice they need to prepare for the National Certification Examination. Current and comprehensive, it will also prove to be an outstanding refresher for seasoned CRNAs preparing for recertification. Certification Review for Nurse Anesthesia is based upon the content areas tested by the National Board of Certification and Recertification of Nurse Anesthetists. Question types include multiple choice, multiple response, and calculation. Detailed explanations are provided for the answers, along with references to appropriate pages in Morgan and Mikhail's Clinical Anesthesiology, Fifth Edition, and other respected anesthesia textbooks, for more detailed discussion of the topic. Questions are intentionally not grouped according to specific topics in order to provide a review that mirrors the actual test.

Book Information

Series: Anesthesia/Pain Medicine

Paperback: 288 pages

Publisher: McGraw-Hill Education / Medical; 1 edition (August 28, 2014)

Language: English

ISBN-10: 0071827668

ISBN-13: 978-0071827669

Product Dimensions: 8.6 x 0.5 x 10.8 inches

Shipping Weight: 1.2 pounds (View shipping rates and policies)

Average Customer Review: 4.2 out of 5 stars 16 customer reviews

Customer Reviews

Shari M. Burns, CRNA, EdD (Glendale, AZ) Associate Professor, Director, Nurse Anesthesia Program, Midwestern University.

This was not the only source used to pass boards but served as a very successful tool. I used the

book while relocating after graduating from school. My father would drive the Penske truck (the only moving truck that should be used to drive across the country) and I would do the questions out of the book. We had 1,938 miles to cover. I used the book from cover to cover. I found a few conflicting questions, overall it helped me pass boards by getting in the right mindset of answering questions. Most importantly it came with rationale. Even if I got the question correctly I would still review the rationale. If you're looking at this book you're probably preparing to pass boards. I used Apex Anesthesia Review to study from, after completing Apex and their questions, I used this and more questions to check my knowledge on different topics, anything that I missed I would review in Apex, Valley Review, or the good old books. I would then do more questions and more questions. I passed my boards the first time and felt confident going in. Good luck!!!

I am currently in a CRNA program, and this book has been helpful in my studies. I like to look at it, as I am studying for a test. It helps me focus on board-like material. Love it!

Lots of errors --- from highlighting the right answers to the rationales themselves. Overall, good resource as a refresher but not for board review. Not sure why this received good reviews.

great resource to have . good questions. wish it had more questions. overall good

Quality Q&A

I think there may be 2 questions about the oxyhemoglobin curve that are incorrect. On page 72, #180 the question asks what the expected P50 should be when there are increased levels of 2,3 DPG. Well, I was taught that 2,3 DPG produces during anaerobic respiration and indicates a low O₂ level at the cells, pushing the curve to the right. In the rationale, you correctly wrote that the curve is pushed to the right-- however you said the P50 level would decrease and the answer marked was P50=22. Right shifted curves have a P50 of >27mmHg. So the rationale is correct, but the answer is not. Also, same thing for #183 on page 73. Question asks what the P50 would be of a patient has a temp of 35.2C. So, that would be indicative of hypothermia or at least decreased temperature, which would be a shift to the left. Your rationale says that also, however it says a left shifted curve increases P50, which is not true. Left shifted curves have a P50 level

The CRNA contributors and I welcome constructive feedback. While there is no perfect review

textbook, numerous edits, reviews and vetting by CRNAs and others resulted in the current work. The text offers students and CRNAs an opportunity to review and refresh on concepts important for professional practice. It is our pleasure to support and advance the nurse anesthesia profession. A special thanks to all who made this addition to the profession possible. Sincere regards, Shari

Fantastic literature for all levels of students and practicing CRNA's! Going back to basics and diving into the nuances of CRNA work are highlights of the text. The book is well thought out, professional in nature and will benefit those studying for certification and re-certification. Thank you for dedicating your time to writing this text!
