Customer Reviews

From the reviews: Written by a team of experts selected for their contributions to the development of national guidelines, this new publication represents a comprehensive review of the management of thyroid cancer. It follows the American and European model of treating patients and would be of value to any serious clinician wishing to enhance their knowlegde in this field. With over 2000 figures and tables and chapters covering medullary and anaplastic carcinoma as well as primary thyorid lymphoma, every aspect possible is dealt with this book. It doesn't need me to say it, but this will become a world-wide best-seller. Dr. M. Haq, RAD Magazine, October 2006 "This is a very readable book which covers the management of thyroid cancer in a comprehensive manner. The

editors are acknowledged international leaders in the field. They have assembled a team of contributors who have provided an excellent and up-to-date review of thyroid cancer. The book provides an invaluable practical resource for clinicians and all other team members involved in the management of thyroid cancer." (Leigh Delbridge, CancerForum, Vol. 30 (3), November, 2006) "The main editor of this book is E. L. Mazzaferri, one of the most renowned experts on thyroid cancer. In conclusion, we think that this book is more than an excellent text for students, residents and practitioners. Its innovative approach and the abundance of useful and uncommon knowledge should ensure that it will become an irreplaceable work of reference for experts in this field. We strongly recommend it to all who are interested in the practical management of thyroid cancer." (N. Panza and L. Mansi, European Journal of Nuclear Medicine and Molecular Imaging, Vol. 34, 2007)

Practical Management of Thyroid Cancer follows the American and European model of treating thyroid cancer according to the high standards recommended by the available guidelines. All rare and curable cancers including thyroid cancers with a good prognosis should be treated by a multidisciplinary team of experts following published guidelines. This essential volume is therefore directed not only to the management of thyroid cancer in developed countries but is also the model that will be highly attractive to the developing countries. This is an invaluable reference to health care professionals, from primary to tertiary care, involved in the management of thyroid cancer such as clinical nurse specialists, clinical psychologists, family medicine practitioners, specialists in palliative care (especially for anaplastic thyroid cancers), genetics as well as surgeons, endocrinologists, oncologists, pathologists, and radiologists.

I particularly liked the format of this book which allows a very user friendly approach to diagnosis and treatment, employing the most current guidelines of the professional organizations. Discussions are succinct and focused, and I have found the answer to every question that I have looked up. An excellent index as well. Should be useful to both endocrinologists, surgeons, and internists treating patients with thyroid cancer.
