## Customer Reviews

"Includes all the forms and advice needed to conduct a patent search online, understand basic patent law and file an application." Library Bookwatch "A great resource for inventors who want to quickly, efficiently and safely protect their precious ideas." Ron Docie, Sr., Author of the Inventor's Bible

Save your place in line at the U.S. Patent and Trademark Office without all the hassle of filing a full-blown patent application. With Patent Pending in 24 Hours, you have all the forms and

information you need to get the job done!

It gave me the information I needed without a lot of superfluous material.

Still reading - could be shorter by eliminating all the stories and stick to the "How to". You cant even read the book in 24 hours - after one - you're falling asleep.

Great read. Very enlightened about the whole patent process after reading this

Excellent book written for the common person. It is well written and great attention to detail to help make people successful.

For me I was a beginner and knowing nothing about patents this book taught me a lot and I'm not done reading it

Very helpful book! Highly recommend it.

So it took me 8 days to write my PPA, day and night. About 3 nights i did not sleep at all. Stood up 24 hrs just trying to be a perfectionist. Based on my experience, and my understanding of how important it is to do a patent application right whether its just a provisional or not, I dont 100% agree with the book saying in just 24 hrs of your time you can write a patent (and I'm sure they mean that 24 hrs can be spilt across a few days). You need to take your time. The book gives you almost everything you need to write and submit your provisional. However, I would suggest that they go into more detail on how to file online simply because I had hell with a PDF font error that kept coming up after I uploaded my Specification file. The illustration/drawings went through fine but the full text document was a pain. The book simoly says if you get any errors go back and fix them. That's not good enough. Between my husband and myself, we had to search the internet to figure out how to resolve the problem. To save you the trouble, i will tell you how to fix the Font embedded error that the USPTO website gives you. The website will tell you your font isnt embedded if you save your PDF file the default way. If you just save the document with the settings MS Word already put there you may run into to trouble. What you have to do is click save as, save the file type as PDF, click on minimum size, click options, select under PDF options "ISO 19005-1 compliant (PDF/A)". Hit ok. Then save. Once your specifaction is saved this way, the USPTO website will accept the upload and

you will be able to continue. They also didn't make the part about the Application data sheet clear enough. They don't refer to actual document name which I had to figure out for myself. I used the PTO/SB/16 form which is the cover sheet required for the provisional application. If I didn't decide to improve my claims and send a second provisional I would not have noticed that I needed to submit that form just going based off the book. Yes I did not use Nolo's system to apply because you don't have to. They also let you know you can choose if to use their system or not. I guess that's why they didn't give you solid details on all the info needed for the uspto website, maybe hoping you'd use theirs. That's a huge assumption on my end though. Anyway, I also did a lot of online research before buying this book and probably half the things in the book I already knew but it still was a lifesaver in many other areas. I like how they have examples of patents in the book. It is so helpful. Overall, the book helps you out and it is written to help you skip chapters as needed so you can just get the info you want as quickly as possible. They didn't just assume you will want to read the whole book. I also like that they have sample of agreements in there too. The book is good but could be better. It should provide assistance with the challenges that occur with the online application process. I'd give 3.5 stars if I could. But that's it. Also, this book won't help you write a provisional patent application you can later convert into a non provisional patent application. It says so itself, so if that's what you're looking for something that will help you write a patent based on the standard requirements this book is not for you. Remember the provisional doesn't have to be like the standard and official non provisional. So if you want to write a provisional that can be used as a non provisional try a book for the non provisional.

not completely worthless, but there's no way that the title is accurate. The authors try to be super cute by giving these stupid examples that don't help. There is far too much non essential information that bogs the reader down. I generally like Nolo's books, but this one is well below average IMHO. I'm going to get a few more books from the library this time because this book is not the one source book that it claims to be.
