# Critical Care Intravenous Infusion Drug Handbook, 1e

## Synopsis

This practical, easy-to-use reference facilitates the administration of 39 of the most complex and common IV infusion drugs used in critical care. Section I presents at-a-glance algorithms covering the ACLS Guidelines for Adult Emergency Cardiac Care. Section II offers a "Quick Mixing Guide" for intravenous infusion drugs. And, Section III covers each of the most complex and common IV infusion drugs in detail, presenting all of the data needed for safe administration. Coverage of each drug addresses its most common uses – preparation and administration – dosages – warnings and adverse reactions – compatibility with other drug infusions – and general nursing considerations. "Drip Rate Calculation Charts" and "Dosing Charts" quickly explain how to mix and prepare drugs that are usually needed by patients on an immediate, urgent basis. Unique "Calculation Factors" for each drug greatly simplify an otherwise complicated process and substantially reduce the chance of medication errors.

## Customer Reviews

Perfect to keep in your pocket at work to use as a reference. Love it!

I was hoping to get a more extensive list of interactions, that is why I bought it. If you do not know IV drips well, this would be a good resource. If you already know drips and do not have something like Lexicomp or King's List available, then this might help in a pinch....especially if the computers are down.

Great

It does have some interesting information. But I don't recommend purchasing this book for that price. I definitely prefer a regular nursing drug hand book that has a lot more information that is needed to know about the medication.

This has quickly become my go to quick reference, just wish there were a bit more critical care drugs!

Perfect for my ER

This is a great, easy to use and accurate resource. The only complaint I have is that because it is spiral and I carry it in my pocket, it got a little worn out and I lost the cover. I bought another one when my first got too ragged to use.

A must have for anyone working in critical care.
