Frank Miele is an unbelievable educator for ultrasound review for the credentialing exams. His explanations of physics for the SPI examination are incomparable to others. I recommend all of his books as they are excellent. All of his books should be on the shelves of every vascular ultrasound laboratory. His question bank is worth going through before sitting for board examinations.

I am an Registered Nurse who branched off into Vascular Ultrasound and on the job trained. When it came to the registry exam I had no prior education in physics or ultrasound. This book helped me pass the registry with flying colors! I felt it did a good job of using three different levels for a person like me with no formal physics or ultrasound education. The CD was very helpful too. Couldn't have asked for a better reference book to help me pass.

US book was in great condition and the service was prompt.thank you for the great books..I tried another website..ended up sending the book back..they did not understand this is a 2 part series..and they only sent me one of the books!!!

The book is wonderfully written. It takes me a while to pick up fancy physics concepts but this outlined complicated processes very well for me. It also comes with an accompaniment CD and has great graphics which help with understanding. I would recommend this to all sonography students and for all ultrasound departments to have them as reference books.

Good price and good delivery time, and in good condition, no complaints!

Great Ultrasound Book, enjoyed working through it and its worth a whopping 35 CME's.

My product came in on time and I strongly recommend this seller! the items I purchased were extremely cheaper than if I would have bought it at a university bookstore

I needed this book for the Physics of Ultrasound class for my ultrasound program. I got it much cheaper here than at the school's bookstore (which I am boycotting for dismal customer service). I had terrific service here though; the book arrived on time and in pristine condition. Thank you!
