# Beyond Initial Response--2Nd Edition: Using The National Incident Management System Incident Command System

## Synopsis

Beyond Initial Response - First Edition was written to fill a significant gap in ICS training.

Responders have to be ready to carry out their ICS position-specific responsibilities and to be effective they have to know how to operate as part of an ICS organization. This book provides readers the confidence, knowledge and assurance that are required to successfully play as part of an incident management team. Beyond Initial Response - Second Edition builds upon the original version that was put through its paces by the greatest critics - first responders and students of emergency management. In the second edition you will find three new chapters: The Area Command chapter, written from the perspective of an Area Commander, a chapter on multi-agency coordination that provides an overview of how multi-agency coordination works from various viewpoints, and the third new chapter titled Emerging Communications, which introduces the topic of New Media and its potential challenges and benefits to incident management teams. In addition to the new chapters, the section of the book that covers the Safety Officer has been significantly expanded, concentrating on hazard analysis. You will also find some new "tools" in the appendixes of the book. These include: Managing Risk, Best Briefing Practices, Sample Instructions to the Field Observer, Delegation of Authority

## Book Information

Paperback: 432 pages

Publisher: AuthorHouse; 2 edition (April 5, 2012)

Language: English

ISBN-10: 1438988613

ISBN-13: 978-1438988610

## Customer Reviews

Michael de Bettencourt is a Health, Safety, and Environment Program Director for a defense services contractor and is a retired US Coast Guard officer. He has provided emergency management program assessment services and conducts ICS training for industry and public sector

clients.&nbsp; He has worked as a responder and response manager for oil spills, chemical releases, floods, and large-scale law enforcement operations.&nbsp; Tim Deal is the Federal Preparedness Coordinator for the Federal Emergency Management Agency (FEMA) in Region VIII. Prior to coming to FEMA he worked as vice President in the emergency management training field. He has extensive emergency response experience serving in several ICS positions, including Planning Section Chief and Operations Section Chief. &nbsp; &nbsp; Vickie Deal works for the federal government and has a variety of operational experience in emergency response management operations.&nbsp; She has been an Operations Section Chief and Deputy Incident Commander.&nbsp; Vickie also served as a response program manager for the Coast Guard in &nbsp; Gary Merrick is an Associate with Booz Allen Hamilton and is a retired US Coast Guard officer.&nbsp;

Everything you need to learn, understand and utilize the Incident Command System. It is well written and clear with useful examples and information. It will have value as a reference long after the class it was purchased for. I recommend this book for anyone needing to use ICS.

An excellent book, in perfect shape; much better then expected, and much earlier than expected. Thank you, thank you, thank you!

excellent sourcebook on the topic.

I just received the book and have just briefly looked through it. It will be a good reference for ICS in the future.

Bought this to see if I could use it for a class that I teach. I made it a requirement for all of my students.

This is an outstanding reference for an EOC, command post, or office. It doesn't do the work for you, but it certainly helps.

This book, from the former US Coast Guard Incident Command training contractor provides some good details for those needing to dig in a little deeper than is covered by I-100, 200, 300. The problem is that several changes have been instituted since its publication that date the reference

and make it inaccurate. It also has a strong Federal perspective -- one from the National Contingency Plan, and not that of everyone else. It does not use the same planning process that all States and locals use, so it needs to be translated into a usable format. Overall, for what it covers it is okay, it just needs to be used with significant caution.

Beyond Initial Response is an outstanding textbook on the Incident Command System. It explains ICS concepts, processes, and positions in a very clear, concise, and practical manner that is easy to understand and apply. Despite on-going tweaks to ICS concepts since the introduction of NIMS, the content of this book is still widely applicable to ICS practitioners at all levels of government and private industry. All of the content in this book, authored by nationally qualified ICS practitioners and grounded in tried-and-true concepts, is consistent with the current NIMS ICS training curriculum including the planning process, unified command concepts, and position descriptions. The book was updated in 2010 to include information on Area Command and the Multiagency Agency Coordination System and added more fidelity to the chapters on various ICS positions. Since 2007 we have issued this book to every student enrolled in one of our ICS classes, including ICS 300, ICS 400, and all position specific courses. Most of the students have made it a staple in their response kits. During training, exercises, and responses, the concepts in the book have help build a common framework for our interactions with other response entities, including local, state, and federal agencies as well as the private sector and have helped facilitate our interagency cooperation. This book is a must have for any responder involved in incident management. There is not another text on the market that explains the Incident Command System as well as this book.
