Saxon Algebra 1: Homeschool Kit Third Edition

Synopsis

Saxon math programs produce confident students who are not only able to correctly compute, but also to apply concepts to new situations. These materials gently develop concepts, and the practice of those concepts is extended over a considerable period of time. This is called "incremental development and continual review." Material is introduced in easily understandable pieces (increments), allowing students to grasp one facet of a concept before the next one is introduced. Both facets are then practiced together until another one is introduced. This feature is combined with continual review in every lesson throughout the year. Topics are never dropped but are increased in complexity and practiced every day, providing the time required for concepts to become totally familiar. Algebra 1, third edition is made up of five instructional components: Introduction of the New Increment, Examples with Complete Solutions, Practice of the Increment, Daily Problem Set, and Cumulative Tests. Algebra 1 covers topics typically treated in a first-year algebra course. This set contains a student text, answer key, and test forms. A solutions manual is available separately. Grade 9.

Customer Reviews

If you want a textbook with just the facts and the "nuts and bolts" of Algebra I, this is a good choice. There are no pictures or fancy charts, etc. I use this for my granddaughter and sometimes I wish there was a little more detailed explanations. But it seems to be an organized approach and she is

learning quickly.

Excellent textbook for homeschool or for tutoring. My son goes to private math classes and his teacher asked specifically for this book. So i did what every good parent would do & bought 2 1 for her & 1 for him so they could use it for class. I also got the teacher all of the testing material as well so all she has to do is teach & grade no worries on creating tests. The tests came with an answer key which is nice for the textbook problems & the tests, which she does not need bc she is the Math Master & doesn't need it, but this would help homeschooling parents grade tests who are not good at math like me, but his tutor does all that for me thank GOD!
