# Building A Strip Canoe

## Synopsis

This completely revised edition includes plans and patterns for eight well-proven designs. Step-by-step directions are accompanied by over 100 photographs plus illustrations. Gil's contemporary construction method augment the traditional wood strips with fiberglass and West System epoxy. The book includes an extensive listing of sources for lumber, tools and supplies. 128 pages.

## Book Information

Paperback: 128 pages

Publisher: Delorme Mapping Company; Revised edition (October 2002)

Language: English

ISBN-10: 0899333494

ISBN-13: 978-0899333496

Product Dimensions: 10.6 x 8.6 x 0.3 inches

Shipping Weight: 13.1 ounces

Average Customer Review: 4.5 out of 5 stars 34 customer reviews

Best Sellers Rank: #775,105 in Books (See Top 100 in Books) #11 in Books > Engineering & Transportation > Transportation > Ships > Boat Building #203 in Books > Sports & Outdoors > Outdoor Recreation > Canoeing #964 in Books > Crafts, Hobbies & Home > Home Improvement & Design > How-to & Home Improvements > Woodworking > Projects

About 12 years ago my dad and I built the wabnaki canoe using Mr Gilpatrick's book, and this year I built a Prospector design using Canoeecraft, at least in part. I would like to add my opinion about the relative merits of these books. Gilpatrick's book is designed, in my opinion, to tell you how to build what used to be referred to in the wood/canvas days as "guide canoes". These were workhorse canoes, without unnecessary decorations, a plain paint job and no frills. Mr Gilpatrick uses his own designs in guiding parties down whitewater rivers in Maine. His book describes how to use 2 layers

of fiberglass to strengthen the bottom for whitewater, has complete instructions for caning very comfortable seats, has a good pattern for a portage-comfortable yoke, and has complete plans for all his designs, which only need to be enlarged. He does NOT spend time discussing stems (which are pretty but not necessary and add a lot of work to the construction), scuppered gunwales, accent strips, patterned decks, etc. It is impossible to build a cedar strip canoe which is not pretty, but function takes precedence in this book. His designs are practical and functional and he has proven that his construction methods produce a tough, durable boat. I think a canoe can sometimes be too pretty. If you're afraid to get it scratched up a bit you're not going to be taking it in places you should. Canoeecraft goes into more detail about appearances and has a section on accent strips, shows finely crafted decks with coamings, and uses a construction utilizing stems. The canoe which is illustrated being constructed is the Redbird, and the canoe is absolutely beautiful. The book has very good trouble shooting sections in the chapters. The designs require either a knowledge of lofting or purchasing plans and there is not a lot of discussion on seat construction. A chapter on lofting and on caning seats would add immensely to this book. (Believe me, if you get used to caned seats you'll never have another kind). Also, the canoes are described as being built with a single layer of glass on the outside and inside. I know a fellow who banged such a canoe into a rock on the Madison river and his \$3000 investment ended up needing major repair work. My double layered wabnaki has bounced off numerous rocks and ledges in the Big Blackfoot river and has its share of scratches but is structurally intact. I would definitely add a layer of glass if you do any whitewater stuff. You can certainly built a very beautiful canoe with the advice in this book, but I think the two books compliment one another and I used both in building the prospector.

My husband has already begun building our canoe. He said this book is perfect!

AAA

Doesn't tell you how to build a fancy show-off woodworker's canoe - just how to build a good functional no nonsense canoe. The plans alone are worth the price.

Very detailed book of instruction. Jig and fixtures explained nicely.

Haven't built it yet , but hope to one day!!

I haven't finished my canoe yet, but this book has been terrific in getting me along so far. The book has great detail and step-by-step guides to complete a strip canoe project. Protect Your Nuts

If you want to build your own Wooden Strip Canoe this is your book!
