Global Climate Change And Cold Regions Ecosystems (Advances In Soil Science)

Synopsis

Global Climate Change and Cold Regions Ecosystems provides information on soil processes and the carbon cycle in cold ecoregions as well as the soil carbon pool and its fluxes in the soils of cold ecoregions. Filling a void in this area of soil science, this resource explains soil processes influencing C dynamics under natural and disturbed ecosystems. The soils of the cold region ecosystems serve as a net sink of atmospheric C. However, an increase in global temperature could render them a net source. In the event of global warming, the cold regions ecosystems—arctic, sub-arctic, alpine, Antarctic, boreal forests, and peatlands—will undergo radical changes. Potential environmental change could drastically increase the active soil layer and influence the large C pool found in them. Topics include: soil C pools in different cold ecoregions, the impact of natural and anthropogenic disturbances on the soil C pool, the method of assessment of C and other properties of soils of the cold regions ecosystems while focusing on the fate of C in permafrost soils. Global Climate Change and Cold Regions Ecosystems covers the current and possible future effects of the cold ecoregions soil C pool on the global carbon pool.

Book Information

Series: Advances in Soil Science

Hardcover: 280 pages

Publisher: CRC Press; 1 edition (June 28, 2000)

Language: English

ISBN-10: 1566704596

ISBN-13: 978-1566704595

Product Dimensions: 10.3 x 7.3 x 0.8 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)

Average Customer Review: Be the first to review this item

Best Sellers Rank: #9,500,174 in Books (See Top 100 in Books) #42 in [Books > Crafts,](#)
